

BANK MANAGEMENT SYSTEM - COMPLETE UML USE CASE DIAGRAM

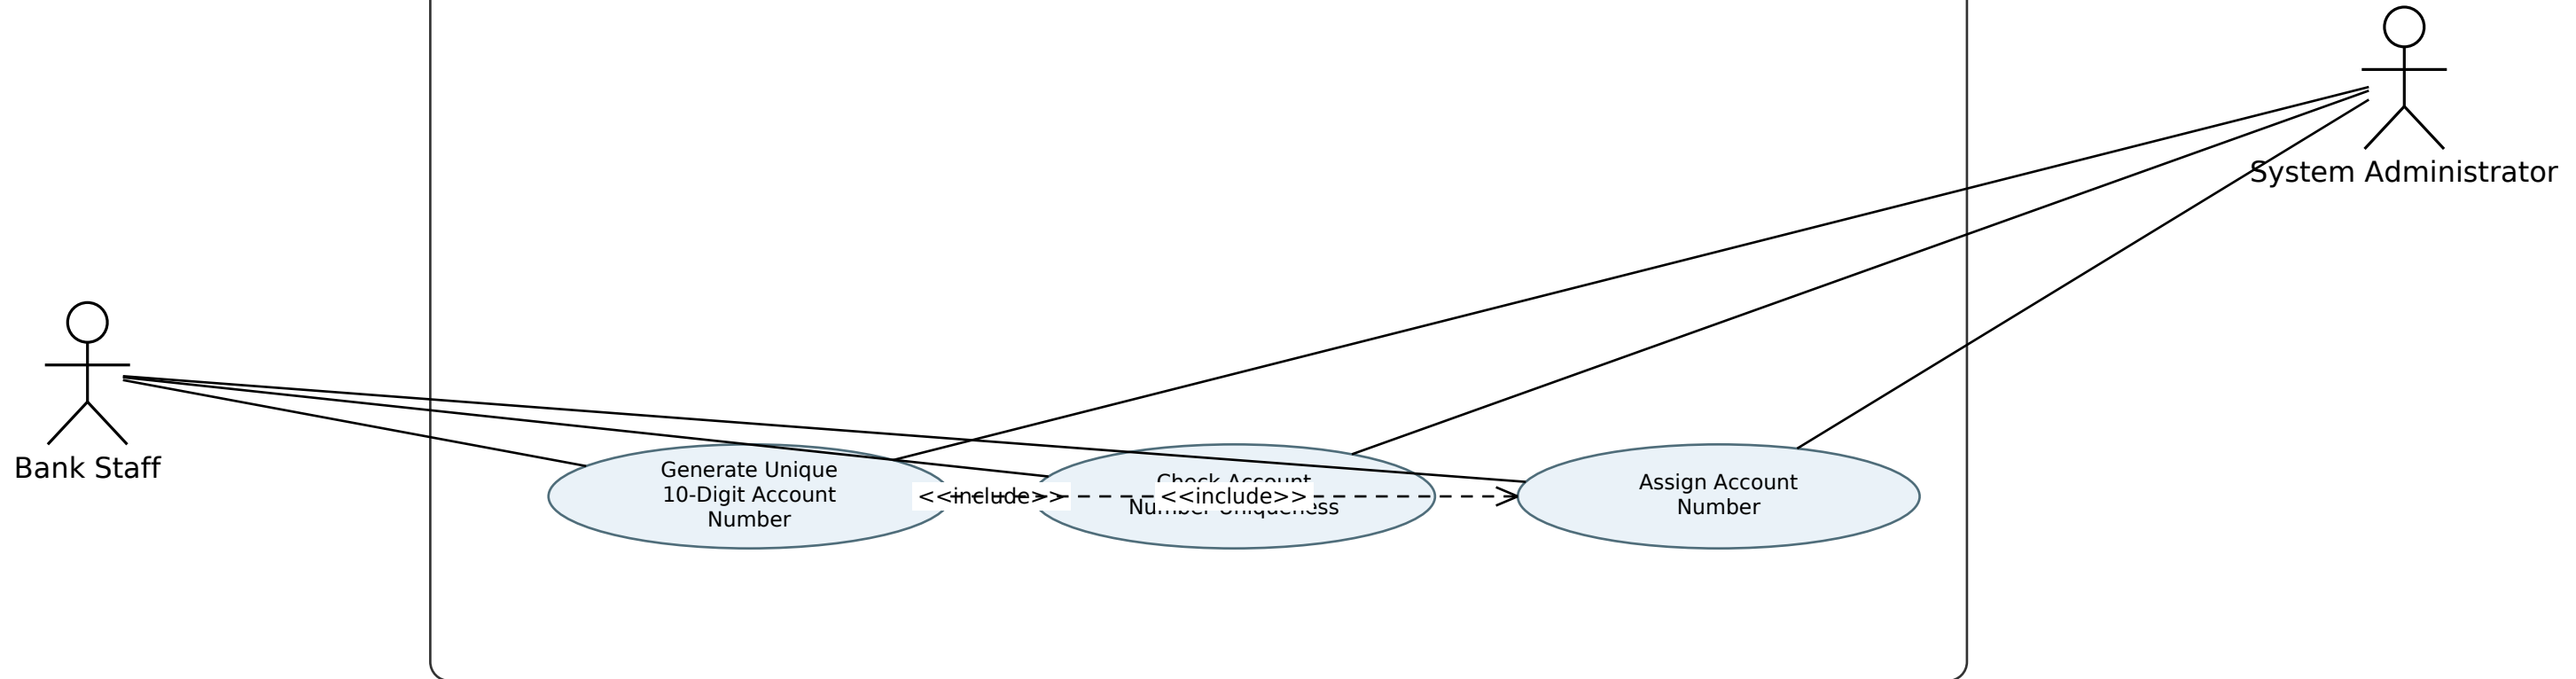

FR-1: Open New Account

A new account can be created only after KYC validation and satisfying the minimum initial deposit requirement.

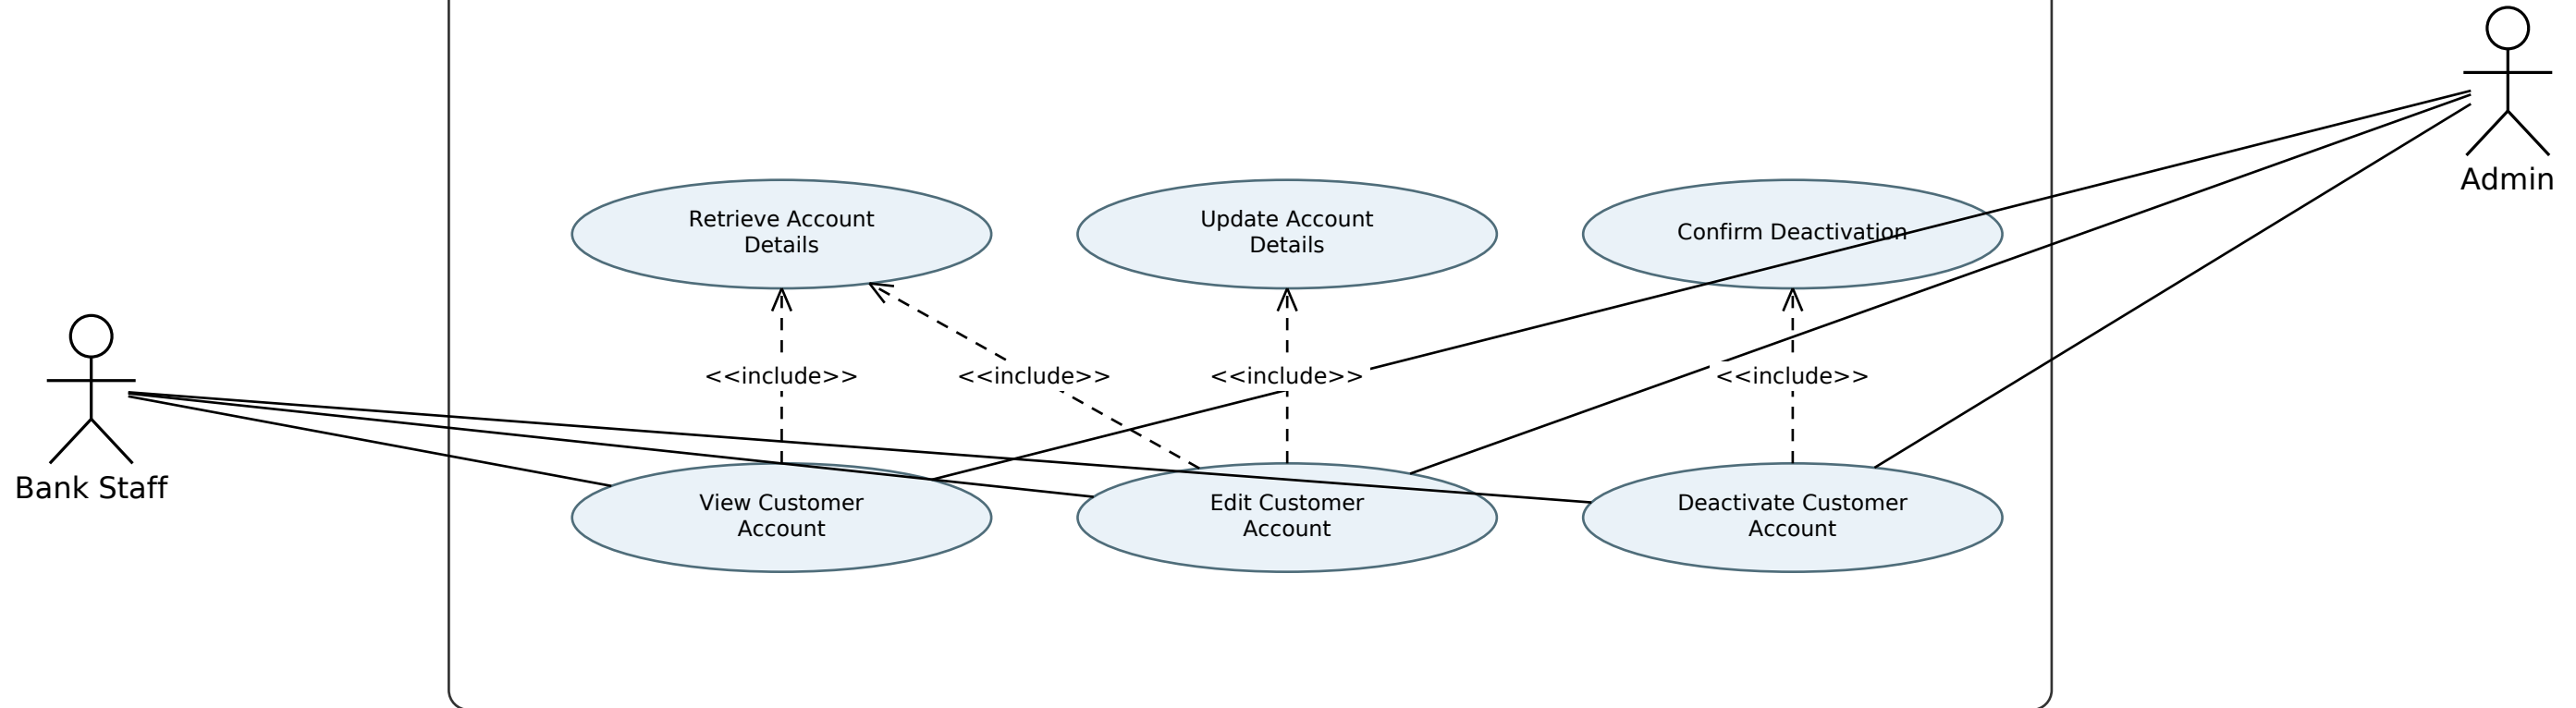

FR-2: Generate Unique 10-Digit Account Number

The generated account number must be unique before it is assigned to the customer account.

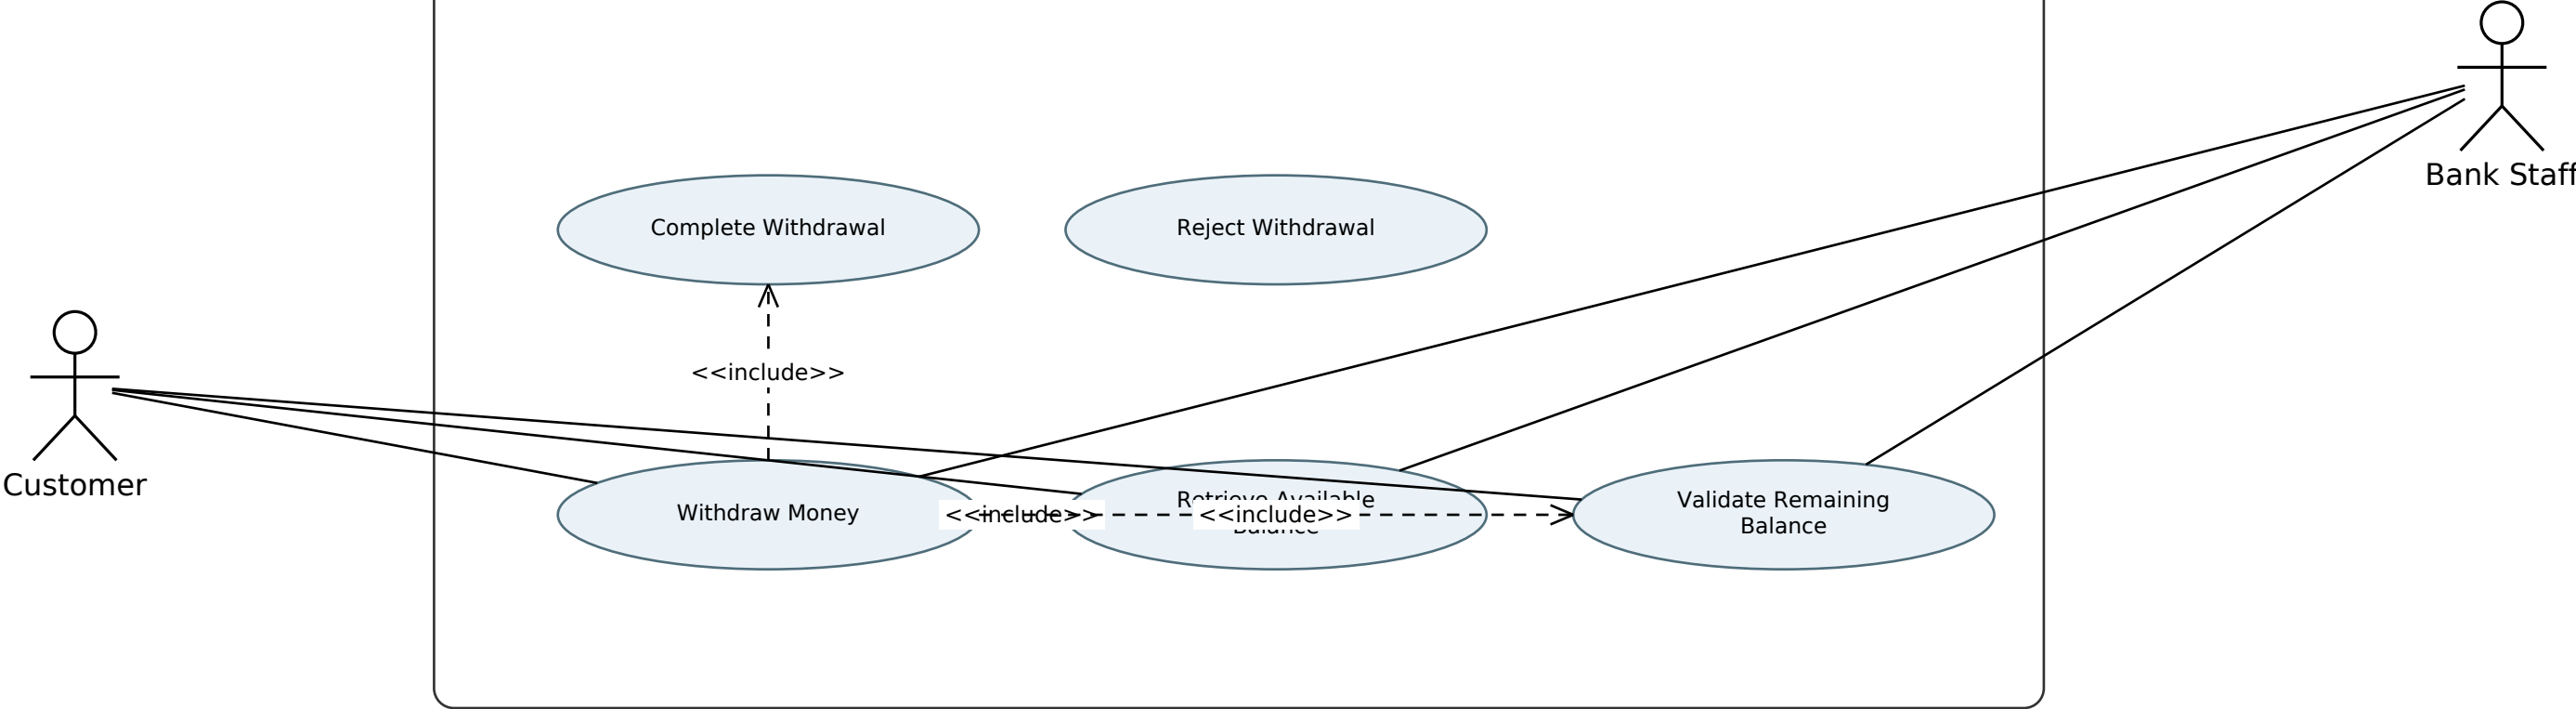

FR-3: View / Edit / Deactivate Customer Account

Bank staff and admin can manage customer account information according to their authorized role.

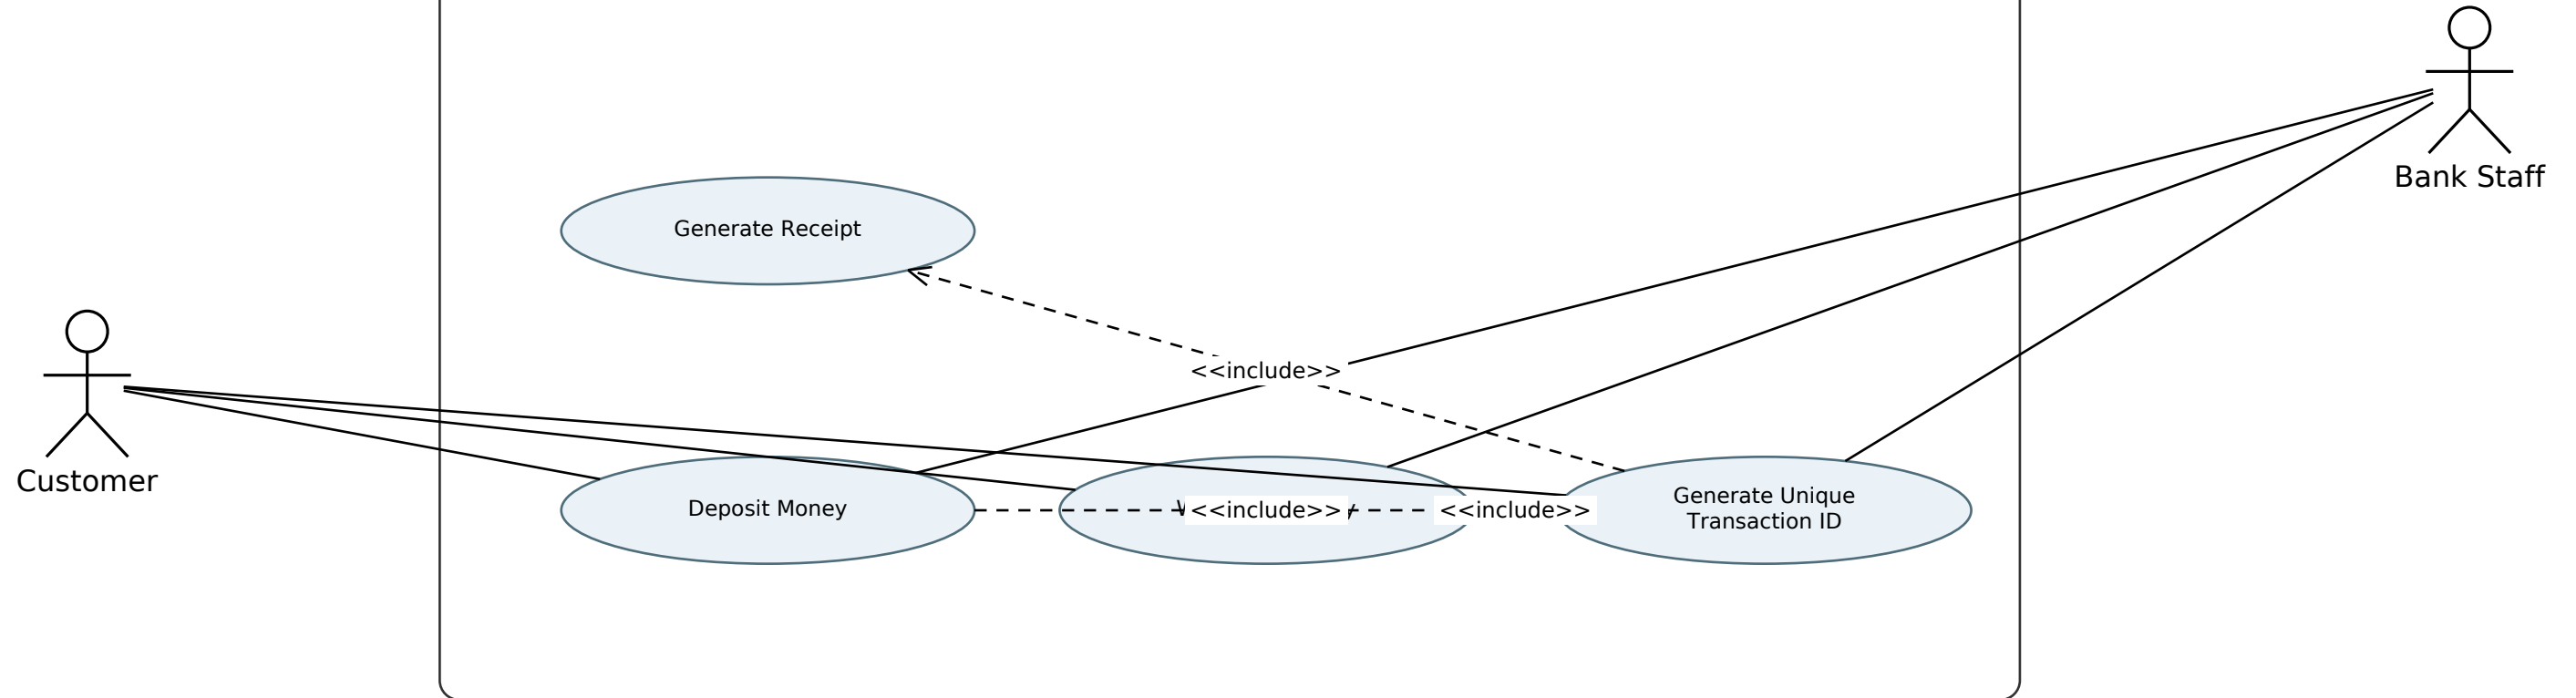

FR-4: Withdraw Money and Validate Minimum Balance

A withdrawal is completed only when the remaining balance satisfies the minimum ₹1,000 requirement.

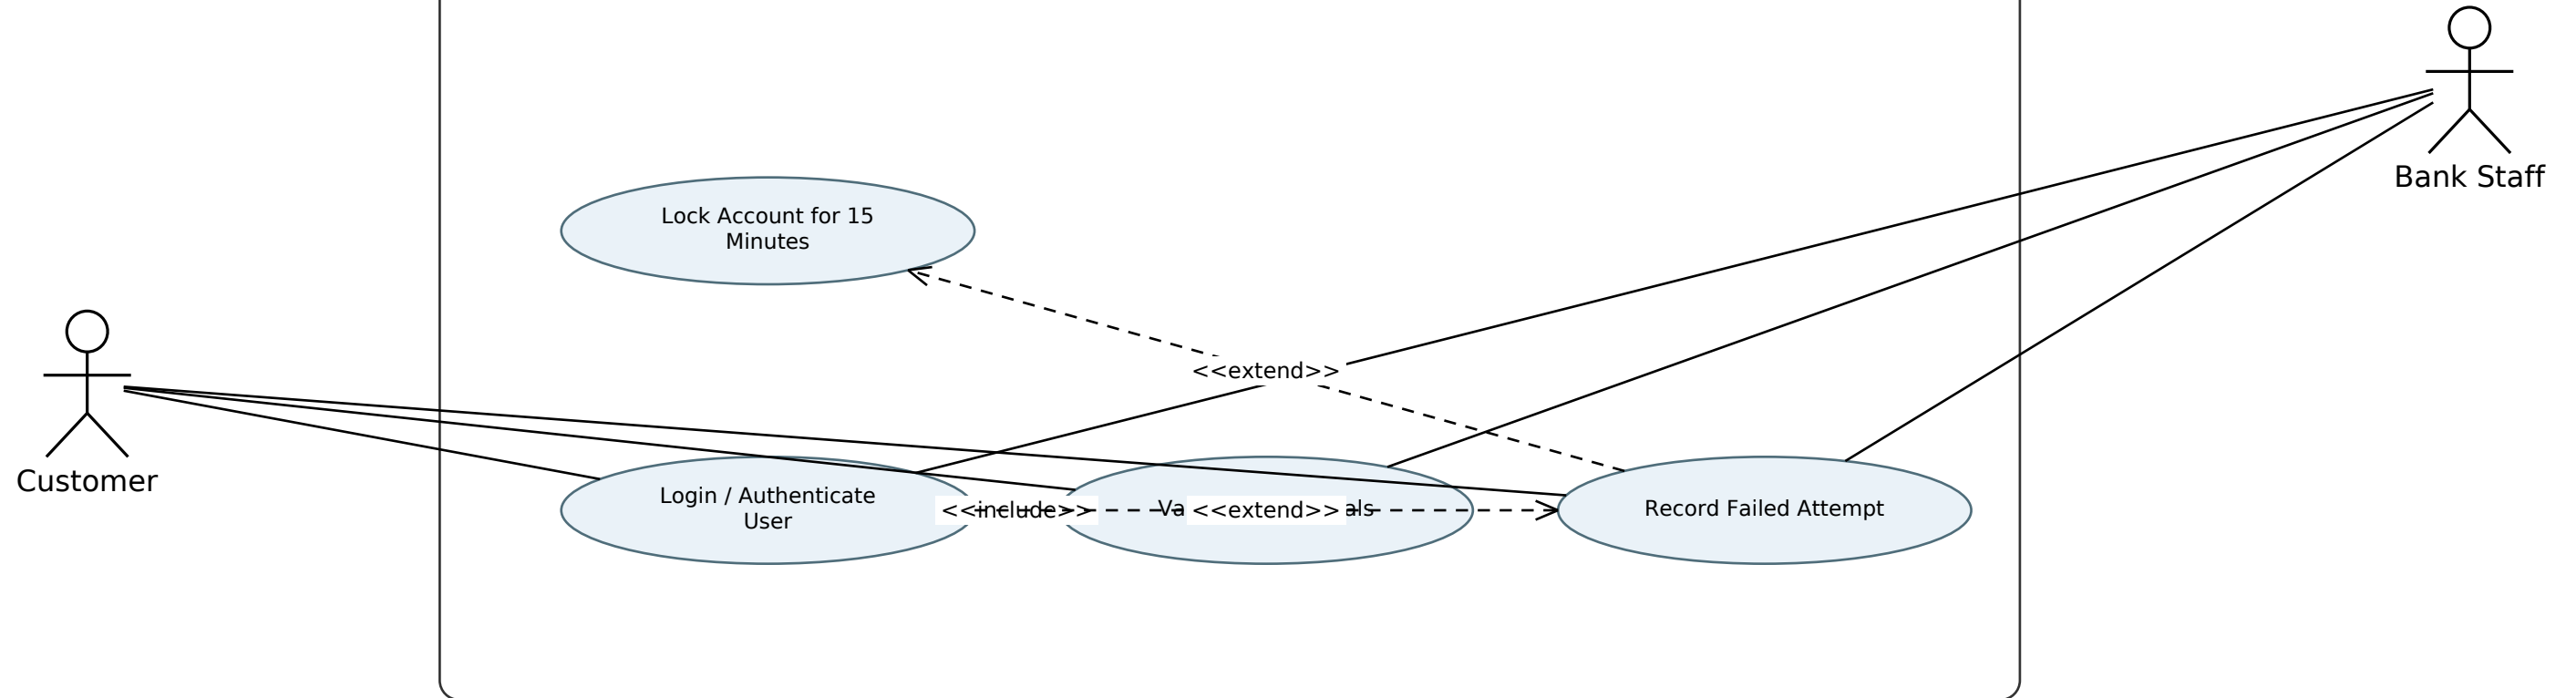

FR-5: Generate Transaction ID and Receipt

Each successful deposit or withdrawal receives a unique transaction ID and receipt.

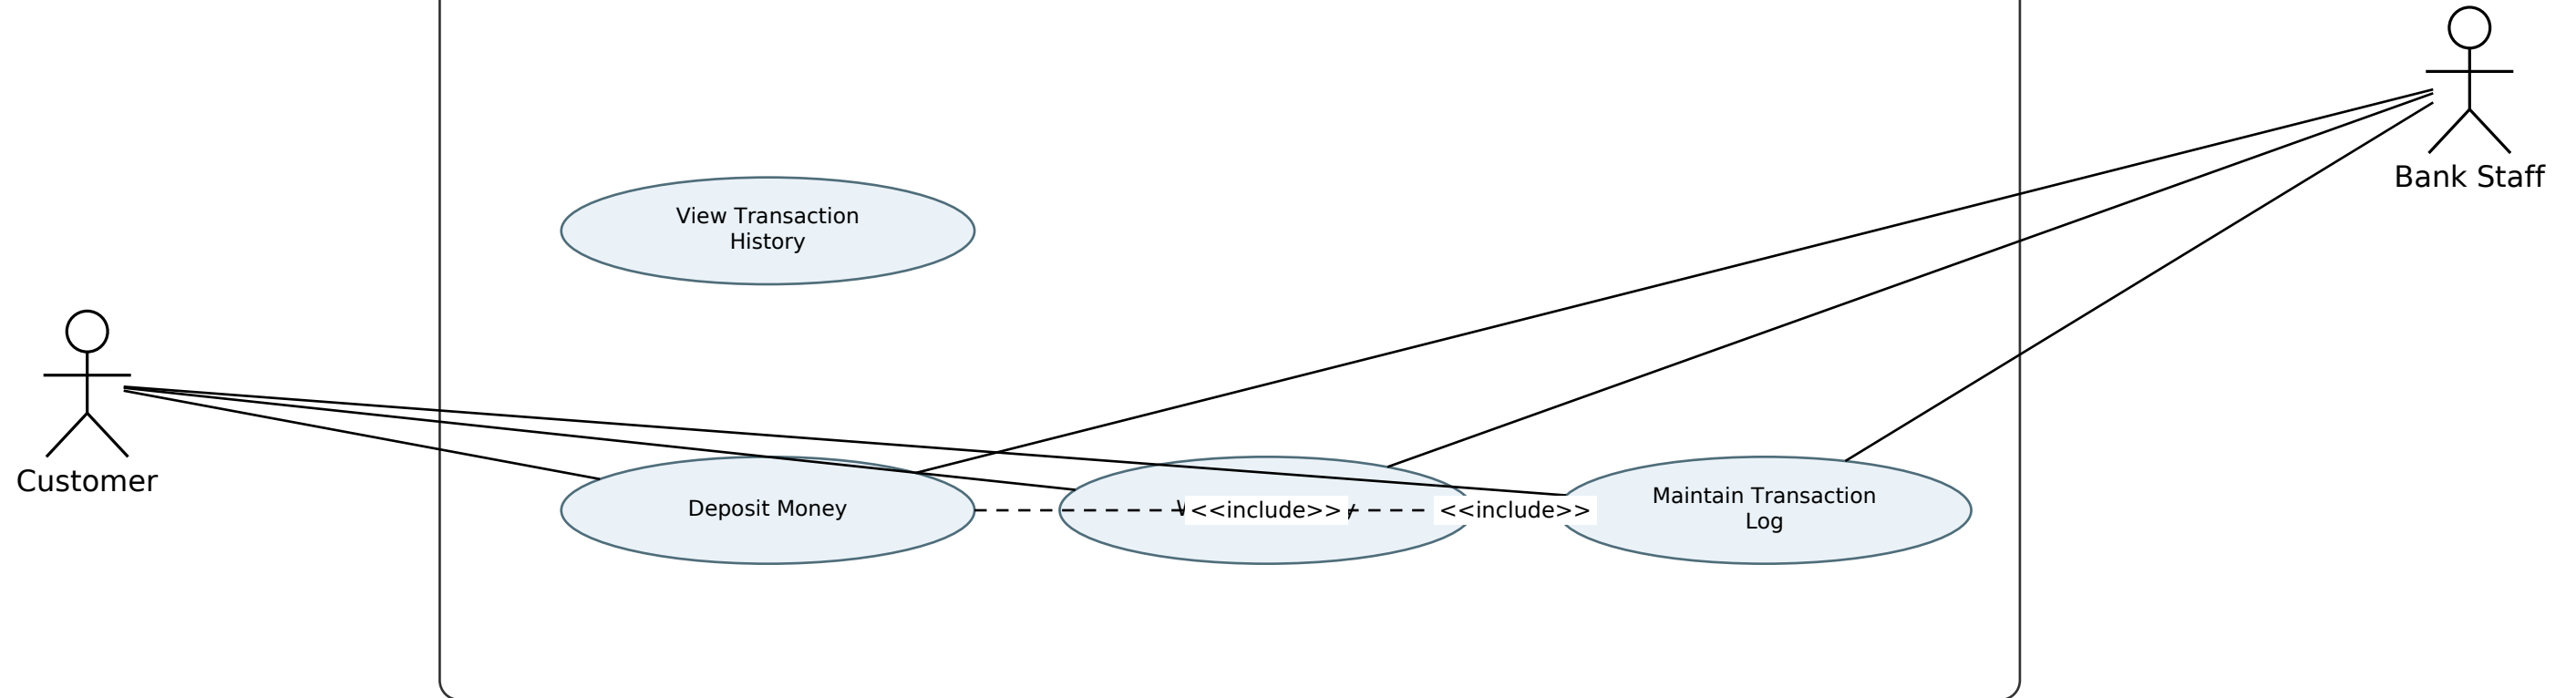

FR-6: Login and Account Lock

The account is locked after three consecutive failed login attempts.

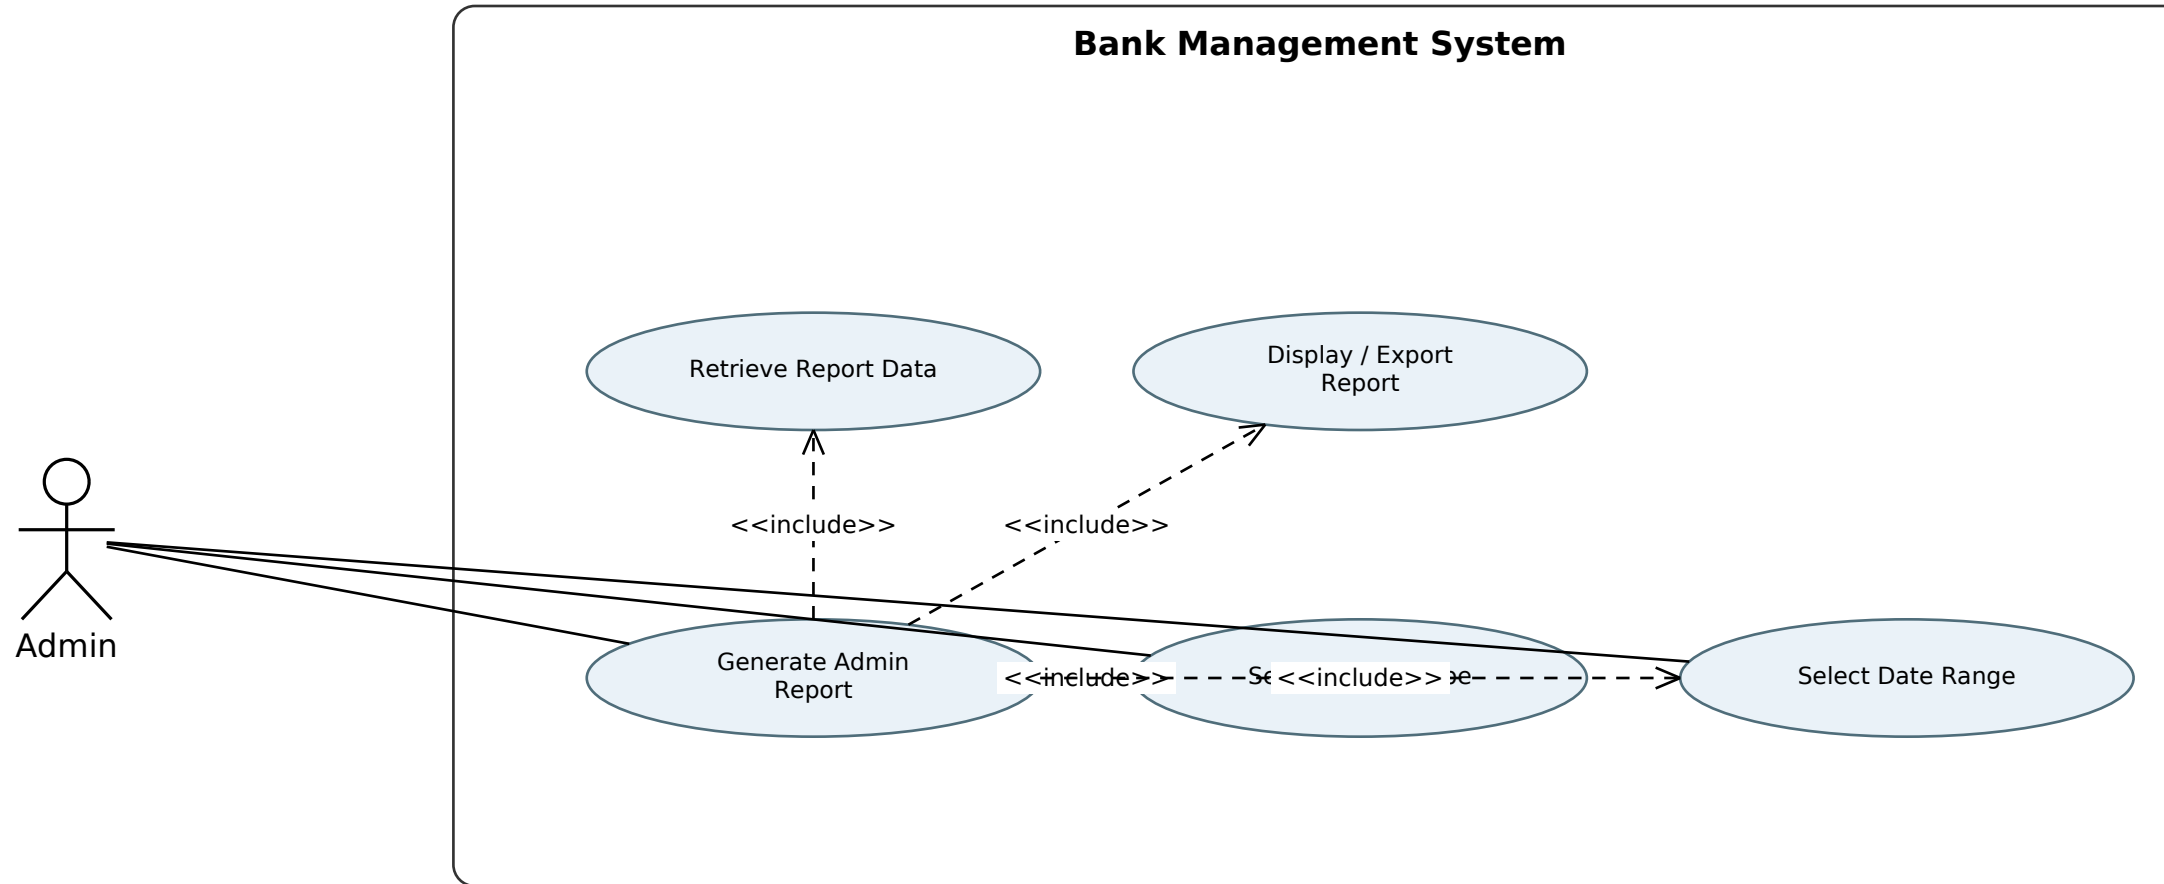

FR-7: Maintain Transaction Log and History

Successful transactions are recorded with timestamp, type, amount and post-transaction balance.

FR-8: Generate Admin Reports

Admin can generate reports for deposits, withdrawals and active accounts for a selected date range.
